

Bina Dhan 17*

(C418/(ZHONG413)2//SH
109/(ZHONG413)2)

Product Profile

Bina Dhan 17 is a high-yielding, early-maturing, medium-height, and medium-slender variety developed at BINA, Bangladesh in collaboration with IRRI. Specifically recommended for irrigated mid-early conditions, it stands out as a green super rice, requiring 25-30% fewer inputs such as water and fertilizers, making it a perfect fit for climate-smart agriculture. Additionally, its grains are suitable for puffed rice. Resistance to BLB and sheath blight further add to the advantages of this variety.

Priority Market Segment - TMeLS-R (Drought Prone)

Planting Method		Ecosystem		
PTR	DSR	Irrigated Lowland	Rainfed Lowland	Upland
Recommended	Not Recommended	Recommended	Not Recommended	Not Recommended

Positioning

Position	Irrigated Lowland	Rainfed Lowland	Upland
Replace	MTU 1010	None	None
Companion	MTU 1156	None	None

Key Strengths

- Excellent yield
- Low input responsive
- Medium slender heavy grain
- Early maturity
- Resistant to BLS and sheath blight

Considerations

- In some exceptional cases, lodging is reported

Relative Variety Performance - Grain Yield and, Agronomic Traits and Grain Shape

Variety	Grain yield		Maturity (days)	Plant height (cm)	Lodging	HRR %	1000 grain weight (g)	Grain Shape
	(Kg/ha)	% Adv						
Bina Dhan 17	5500-6000	33	118-120	100-105	Tolerant	62	26	MS
MTU - 1010	4000-4500		120-125	105-108	Tolerant	58	25	LS

Relative Variety Performance - Biotic and Abiotic Stress

Variety	Leaf blast	Leaf blight	Brown plant hopper	Sheath blight	Drought
Bina Dhan 17	Resistant	Resistant	Resistant	Tolerant	Tolerant
MTU - 1010	Tolerant	Tolerant	Tolerant	Tolerant	Susceptible

Producibility: Bina Dhan 17 = 2400Kgs. / acre

Recommendation: Released for cultivation in Assam, Tripura & West Bengal. Suitable for Odisha and Chhatisgarh also.

*Parental line (s) from IRRI germplasm
