

CR Dhan 1009 sub 1*

(IR40931-33-1-3-2)

Product Profile

CR Dhan 1009 sub 1 is a high-yielding, submergence-tolerant, late-maturing, semi-dwarf variety, characterized by short bold grains. It's a newer version derived from the Savitri variety, specifically suited for cultivation in eastern India. Demonstrating high adaptability to flood-prone, rain-fed shallow lowlands, it exhibits moderate resistance to BPH, WBPH, brown spot, and leaf blast. It has intermediate gelatinization temperature and soft gel consistency indicating its similarity to CR Dhan 1009. Rice from this variety is widely favored for idli making in South India.

Priority Market Segment –TLaS-R

Planting Method		Ecosystem		
PTR	DSR	Irrigated Lowland	Rainfed Lowland	Upland
Recommended	Not Recommended	Not Recommended	Recommended	Not Recommended

Positioning

Position	Irrigated Lowland	Rainfed Lowland	Upland
Replace	None	Pooja	None
Companion	None	Ranjit sub 1	None

Key Strengths

- High yield
- Late maturity; Profuse tillering (16-20)
- Submergence tolerance
- Resistant to BPH, WBPH, brown spot and leaf blast.
- Medium tall genotype

Considerations

- Little sticky
- Bold grain

Relative Variety Performance - Grain Yield, Agronomic Traits and Grain Shape

Variety	Grain yield		Maturity (days)	Plant height (cm)	Lodging	HRR %	1000 grain weight (g)	Grain Shape
	(Kg/ha)	% Adv						
CR Dhan 1009 sub 1	6500-7000	17	150-155	100-105	Tolerant	63	23	SB
Pooja	5000-6000	-	150-155	90-95	Susceptible	54	20	MS

Relative Variety Performance - Biotic and Abiotic Stress

Variety	Leaf blast	Brown Spot	Sheath blight	BPH	Leaf folder
CR Dhan 1009 sub 1	Resistant	Resistant	Tolerant	Resistant	Tolerant
Pooja	Tolerant	Tolerant	Susceptible	Susceptible	Tolerant

Producibility: CR Dhan 1009 sub 1=2800Kgs. / acre

Recommendation: Released for cultivation in flood prone lowland ecology of Tamil Nadu. Performs well in other states (Odisha, West Bengal, Assam) in eastern India

*Parental line (s) from IRRI germplasm
