

MTU-1075

(Pushaymi)

(MTU-2716 x MTU-1010)

Product Profile

A high-yielding, late-maturing, semi-tall variety with long slender grains, MTU-1075 is extensively cultivated in South India. Developed by ANGRAU University (Maruteru) and released in 2008, it is highly adapted to irrigated lowlands. Renowned for its good cooking quality, it exhibits tolerance to important diseases and insect pests, along with moderate HRR. Additionally, it boasts good grain weight, further enhancing its appeal to farmers.

Priority Market Segment - TMeLS-R

Planting Method		Ecosystem		
PTR	DSR	Irrigated Lowland	Rainfed Lowland	Upland
Recommended	Not Recommended	Recommended	Not Recommended	Not Recommended

Positioning

Position	Irrigated Lowland	Rainfed Lowland	Upland
Replace	MTU-1001	None	None
Companion	DRR-50	None	None

Key Strengths

- Good yield potential
- Non-lodging
- Long slender grain
- Semi-tall
- Tolerant to major diseases and insect pests
- Good cooking quality

Considerations

- Susceptible to Sheath blight

Relative Variety Performance - Grain Yield, Agronomic Traits and Grain Shape

Variety	Grain yield		Maturity (days)	Plant height (cm)	Lodging	HRR %	1000 grain weight (g)	Grain Shape
	(Kg/ha)	% Adv						
Pushyami	5500-6000	9	130-135	105-108	Tolerant	54	21	LS
MTU-1001	5000-5500		130-135	110-115	Susceptible	69	23	MS

Relative Variety Performance - Biotic and Abiotic Stress

Variety	Leaf blast	Leaf blight	Sheath blight	BPH	Gall midge
Pushyami	Tolerant	Tolerant	Susceptible	Tolerant	Tolerant
MTU-1001	Tolerant	Resistant	Susceptible	Tolerant	Susceptible

Producibility: Variety Pushyami = 2200-2400Kgs. / acre

Recommendation: Released for cultivation in Andhra Pradesh, Telangana, Odisha.

Zonal VII(S) check for Initial varietal trials conducted by IIRR, India.
