

MTU 1153

(Chandra)

(MTU 1010 / MTU 1081)

Product Profile

MTU-1153, also known as Chandra, stands as a high-yielding, medium-maturing, long-bold, tall variety introduced in 2016 by RARS, Maruteru. Primarily intended for irrigated areas across states such as Punjab, Bihar, Madhya Pradesh, Chhattisgarh, Maharashtra, Tamil Nadu, Karnataka, and Kerala, it is highly recommended for medium fertility regions during the wet season and irrigated areas in the dry season. Besides its remarkable yield potential, Chandra offers distinct advantages including high HRR, non-lodging characteristics, low shattering, and tolerance to major diseases and insect pests.

Priority Market Segment - TMeLS-R

Planting Method		Ecosystem		
PTR	DSR	Irrigated Lowland	Rainfed Lowland	Upland
Recommended	Not Recommended	Recommended	Not Recommended	Not Recommended

Positioning

Position	Irrigated Lowland	Rainfed Lowland	Upland
Replace	MTU 1010	None	None
Companion	MTU-1156	None	None

Key Strengths

- High yield potential
- Long bold; high HRR
- High fertilizer responsiveness
- Tolerant to major diseases and insect pests
- Non-lodging, low shattering (<2%)

Considerations

- Dormancy for about 2 weeks

Relative Variety Performance - Grain Yield, Agronomic Traits and Grain Shape

Variety	Grain yield		Maturity (days)	Plant height (cm)	Lodging	Shattering	1000 grain weight (g)	HRR %	Grain Shape
	(Kg/ha)	% Adv							
MTU 1153	6500-7000	55	115-125	105-110	Tolerant	Tolerant	24	73	LB
MTU 1010	4000-4500		120-125	105-108	Tolerant	Tolerant	25	58	MS

Relative Variety Performance - Biotic and Abiotic Stress

Variety	Leaf blast	Leaf blight	Brown plant hopper	Brown spot	Sheath rot	Neck blast	False smut
MTU 1153	Tolerant	Tolerant	Tolerant	Tolerant	Tolerant	Tolerant	Resistant
MTU 1010	Tolerant	Tolerant	Susceptible	Tolerant	Tolerant	Tolerant	Susceptible

Producibility: MTU 1153 (Chandra) = 2800Kgs. /acre

Recommendation: For planting in irrigated areas in the states Punjab, Bihar, Madhya Pradesh and Chhattisgarh, Maharashtra, Tamilnadu, Karnataka and Kerala.
