

Nua Kalajeera

(IET 18393)

(Pure line selection of Kalajeera)

Product Profile

Nua Kalajeera, characterized by its strong aroma and short bold grains, was developed in 2008 through pure line selection from the local Kalajeera variety, in a joint effort by OUAT and NRRI. This tall, late-maturing variety features a distinct black husk color and boasts high iron and zinc content, contributing to its nutritional value. Notably, Nua Kalajeera offers a longer shelf life and has been recognized by APEDA as one of the most popular landraces for commercialized export. It is popular for pudding, used for festival and other special occasions by the tribals. Moreover, Nua Kalajeera performs exceptionally well under organic nutrient management practices.

Priority Market Segment - TLAS-R

Planting Method		Ecosystem		
PTR	DSR	Irrigated Lowland	Rainfed Lowland	Upland

Positioning

Position	Irrigated Lowland	Rainfed Lowland	Upland
Replace	None	Kalajeera	None

Key Strengths

- Good aroma
- Longer shelf life
- High HRR
- Profuse tillering; tolerant to lodging
- Moderately resistant to sheath rot, sheath blight, and blast
- Long and dense panicle

Considerations

- Low yield
- Tall plant
- Low grain weight
- Photo sensitive

Relative Variety Performance - Grain Yield, Agronomic Traits and Grain Shape

Variety	Grain yield		Maturity (days)	Plant height (cm)	Lodging	HRR %	1000 grain weight (g)	Grain Shape
	(Kg/ha)	% Adv						
Nua Kalajeera	2500-3000		145-150	135-140	Tolerant	62	15	SB

Relative Variety Performance - Biotic and Abiotic Stress

Variety	Leaf blast	Leaf blight	Sheath blight	Sheath rot	Yellow Stem borer	Gall Midge
Nua Kalajeera	Tolerant	Tolerant	Tolerant	Tolerant	Tolerant	Tolerant

Producibility: Nua Kalajeera = 1100Kgs. / acre

Recommendation: Released for cultivation in Odisha
