

Pooja

(Vijaya x T141)

Product Profile

Pooja is a high-yielding, late-maturing, semi-tall variety with long slender grains, extensively cultivated in Eastern India. Developed by NRRI, Cuttack, and released in 1999, it is highly adapted to lowland environments. Known for its good cooking quality, it exhibits tolerance to major diseases and insect pests, along with moderate HRR and good grain weight. Notably, it tolerates water stagnation up to 25 cm and is suitable for late transplanting with aged seedlings.

Priority Market Segment - TLAM-R

Planting Method		Ecosystem		
PTR	DSR	Irrigated Lowland	Rainfed Lowland	Upland
Recommended	Not Recommended	Not Recommended	Recommended	Not Recommended

Positioning

Position	Irrigated Lowland	Rainfed Lowland	Upland
Replace	None	Swarna	None
Companion	None	Varsha	None

Key Strengths

- High yield
- Late maturity; Profuse tillering
- Strong straw strength
- Tolerant to lodging and shattering
- MS grain with good cooking & eating quality
- Photo sensitive variety

Considerations

- Susceptible to brown spot, bakanae
- Moderate HRR
- Low grain weight

Relative Variety Performance - Grain Yield, Agronomic Traits and Grain Shape

Variety	Grain yield		Maturity (days)	Plant height (cm)	Lodging	HRR %	1000 grain weight (g)	Grain Shape
	(Kg/ha)	% Adv						
Pooja	5000-6000	-	150-155	90-95	Susceptible	54	20	MS
Swarna	5500-6000		140-145	85-90	Susceptible	69	16	SB

Relative Variety Performance - Biotic and Abiotic Stress

Variety	Leaf blast	Leaf blight	Sheath blight	BPH	Gall midge	Submergence
Pooja	Tolerant	Tolerant	Susceptible	Susceptible	Resistant	Tolerant
Swarna	Susceptible	Resistant	Susceptible	Susceptible	Susceptible	Susceptible

Producibility: Pooja=2000-2400 Kgs. / acre

Recommendation: Released for cultivation in Odisha, Andhra Pradesh, Madhya Pradesh, West Bengal.
Zonal-III (E) check for varietal trials conducted by IIRR, India
